Sarbanes-Oxley Automated-Compliance Software Now Available on the Oracle Database Platform

Cary, N.C., August 15, 2005 — In response to marketplace demand, Compliancy Software announces the release of Internal Control Management (ICM) on the Oracle database platform.

Compliancy's proprietary software automates the rigorous compliance effort to meet Sarbanes-Oxley demands. The biggest challenge for companies is determining whether they have reportable deficiencies. ICM allows users to consolidate and clarify any outstanding issues with an automated process that leaves nothing to guesswork.

ICM now supports Oracle versions 9i and 10g along with Microsoft SQL Server. This provides ICM clients and users with more implementation options allowing them to better take advantage of existing platforms and support structures, which can lower the operating cost.

In May of this year, the latest version of ICM, the flagship product of Compliancy Software, based in Cary, N.C was unveiled at the Ultimus Americas and Ultimus EMEA User Conferences in Miami and Munich, Germany.

"The current upgrade to integrate with Oracle opens broader markets to ICM and better positions us in the competitive landscape", says Mark Shaw, President of Compliancy Software. "We have seen a real demand for Oracle. We have planned customer implementations in North and South America this quarter on the Oracle platform."

About Compliancy

Compliancy is dedicated to helping organizations maintain compliance with the Sarbanes-Oxley Act by providing business process management (BPM) solutions to ensure all control policies and processes are followed. Compliancy improves control while reducing the cost, stress and resources required for compliance. Additional information about Compliancy can be obtained by visiting the Compliancy web site at <http://www.CompliancySoftware.com>, emailing info@CompliancySoftware.com, or by calling 919-342-6212.
