Southern Star Central Gas Pipeline, Inc. Selects Compliancy Software to Automate Key Business Processes
Offering ideal for automating both their Sarbanes-Oxley Internal Controls and Application Access Security reviews.

September 10, 2008 **--** Compliancy Software, provider of next generation GRC Plus™ solutions for automating business processes for Governance, Risk management, and Compliance regulation along with any general business operations was selected by Southern Star Central Gas Pipeline, Inc. to automate their Sarbanes-Oxley Internal Controls and their quarterly Application Access Security reviews.

Southern Star, with employees nation wide, is a Midwestern natural gas transmission system with a 6,000 mile reach that has provided reliable and quality services to such states as Kansas, Oklahoma, Missouri, Wyoming, Colorado, Texas, Nebraska, and Kentucky for over 100 years.

Southern Star selected Compliancy because they wanted a BPM base solution with built in compliance controls and templates that was easy to implement, more cost effective, and flexible enough to automate their SOX testing and certification practices and then extend the procedural management features deep within their core business.

In addition, Southern Star chose Compliancy's software to automate and document their quarterly application access security reviews to improved their efficiency and eliminate hours of administration time. The new solution replaces a process that included emailing and manually collecting signatures by utilizing the BPM based capabilities of Compliancy's process scheduler, out-of-the-box web forms, built-in escalations and e-signature capabilities.

"Compliancy's application provides the flexibility to start with any business process and then expand as needed," said Mark Shaw, President and co-founder of Compliancy Software. "It is unique with built-in controls structures and processes to ensure compliance of any business process whether it is regulatory or any general business operation."

Compliancy's application is an integrated BPM-based automation solution that is easier to use with integrated roles driven interfaces and its unique Individualized Task Routing™ (ITR) so that task owners only deal with their specific tasks thus eliminating access to complex systems and significantly reducing training and support costs. It offers advanced capabilities such as continuous control monitoring, rules driven escalations, customizable alerts and reporting, and web services driven application integration.

About Compliancy Software
Compliancy Software provides a single application that is BPM-based for automating any business processes with built-in compliance level controls to ensure results. Companies have the flexibility to start anywhere and grow to address all their Governance, Risk Management, and Compliance (GRC) requirements PLUS their general business operations such as financial processes. Compliancy Software is experienced in a broad range of process automation implementations across multiple regulatory compliance and business operations such Sarbanes-Oxley, FCPA, Month End Close and General Ledger reconciliation, Budget processes, Security processes and more. Compliancy Software can provide solutions ranging from on premise enterprise solutions to Software-as-a-Service to best fit a company's budget and requirements.
